Professional experience

● **Sep 2024 - Present** / 1 year 9 months

Frontend Developer - Yopeso

Remote

I started working for Yopeso in September 2024 and I had been working on 2 projects so far.

The first experience was working for Kustom. I was helping out on the transition from Klarna to stabilise and self host the checkout app for Kustom.

In those 4 months I had multiple focus points:

- fixing known and unknown bugs
- implementing features like opt-out of newsletter, publishing packages to an artifactory (JFrog) via npm, dealing with package versioning, implementing manual translations, implementing the express checkout button from Stripe, fixing bugs for the BankID flow, working on the B2B flow to stabilize it
- creating docs for frontend onboarding

The second project I was assigned to was Spark (a dating platform) that incorporates multiple dating app brands and locales.

- took over the project with almost 0 documentation
- helped Spark migrate from Hexaware to Yopeso with 0 major issues
- reduced Sentry errors from 230k/week to 180k/week and determined the root cause of the errors
- I resurrected the web dev chapter meeting
- Created docs + onboarding docs on the FE
- Helped implement Katalon e2e test suite in the build pipeline
- Worked with GTM
- Worked with Braze

The third project that I worked on is Permira Prompt which is an internal AI platform that Permira would like to use in the future to help investment.

I've implemented the "Shared chats" feature that lets users share their chats with others or with groups. This was a short but quite cool experience since it was like familiarizing myself with different AI concepts like MCP, tokens and other such terms.

The ongoing project that I'm assigned to is Klarna:

- I'm responsible for the documentation website docs.klarna.com.
- It's a hybrid role sharing knowledge between frontend and backend using next.js as a platform for doing this

Confidential Salary

● **Aug 2021 - Mar 2024** / 2 years 7 months

Frontend Developer - Urban Sports Club

Köln

As a frontend developer on the bookings and payments team at Urban Sports Club, I was responsible for developing new features on our new platform and fixing bugs on the old platform as needed.

This position has helped me gain TypeScript and frontend testing experience (react-testing-library), which I use to ensure a seamless user experience for our customers.

Wins:

- creation of the Payouts page (a page where gym providers can view their invoices)
- creation of the Attendance page (a page which shows the users that have booked a class or event)
- actively participated in the conceptualization of the design system
- moderated the Frontend Competence Center meeting (a meeting with all frontend engineers in the company)
- moderated some daily meetings or retrospective meetings (Agile environment)

Confidential Salary

● **Nov 2019 - Jul 2021** / 1 year 8 months

Frontend Developer - Cloud Innovations SRL

Timisoara

- maintenance of the Jubiter Stack. This included the 3 main components of it. The app itself (a crypto exchange platform), a presentation website and an admin dashboard.
- taking active part in the decision making of the tech-stack that is going to be used when developing a new crypto exchange called Coindeck (out of date now)
- giving ideas for a better development experience
- cutting the cost with man hours and improving MTTR (average time to solve a ticket for CS) by 28%. This was achieved by improving the UI of the admin tool and helping CS visualise the data more clear

The tech stack included Vanilla JS + jQuery for the old apps and ReactJS + Tailwind CSS for the newer and improved version.

Confidential Salary

● **Jan 2019 - Oct 2019** / 9 months

Frontend Developer - Cognizant

Timisoara

- maintaining and bug fixing on the Estée Lauder platform
- development of minor features like adding a zoom component while hovering on images or adding a quickshop component to Bobbi Brown
- theming parts of the new Bobbi Brown and Too Faced website
- fixing merge conflicts and deploying to DEV and STAGE environments using Jenkins

Confidential Salary

● **Jan 2018 - Dec 2018** / 11 months

Junior Frontend Developer - ITVizion

Timisoara

- getting a glimpse of what the frontend industry is all about
- learning AngularJS
- helping to develop small features and fixing minor bugs
